DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Todd Miller, Applicant himself on June 9, 2004.

The application has been amended as follows:

All previous claims have been cancelled.

The following claims have been added

--

61. (New) A searching system comprising computer software that transparently and automatically manages one or more disparate authorization steps, including:

authentication and session management, required for one or more users to access, query and retrieve and display results concurrently from multiple licensed information resources or databases,

wherein the session management comprises:

a first set of sub-session managements which authenticate by user basis to licensed information resources or to databases; and

a second set of sub-session managements which authenticate by system basis to licensed information resources or to databases.

62. (New) The searching system of claim 61, wherein the software is further configured to provide a summary of at least some of the responses to the specific user.

63. (New) The searching system of claim 61, wherein at least some of the responses from said licensed information resources or databases provide access to full records or full-text resources, and the software is further configured to transparently and automatically manage one or more disparate authorization steps, including authentication and session management, required to access and display at least some of the full record or full-text resources.

64. (New) The searching system of claim 61, wherein the software communicates with multiple licensed information resources or databases using an interface protocol selected from a group including HTTP, telnet, Z39.50 and ODBC.

65. (New) The searching system of claim 62, wherein the summary includes a markup language selected from a group including HTML, DHTML, and XML.

66. (New) The searching system of claim 61, wherein the software parses the results

into summative statistics and records, which are logged and recorded into a transactionlog.

67. (New) The searching system of claim 61, wherein the user can be a person or an organization or a user group. --.

The support for the new claims can be found in the specification. For example, the sub-session managements can be seen from the database translators of Figure 1.

Allowable Subject Matter

Claims 61-67 are allowed. The following is an examiner's statement of reasons for allowance: As noted at pages 1-3 of the specification of this application, such access to multiple databases without such cumbersome authentication in the context of other limitations of the claims were not taught or suggested by the prior art. The claimed invention achieves this by authenticating by user basis rather than limiting itself to authenticating by system basis.

Conclusion
